

Haden Young

AstraZeneca R&D Charnwood, Loughborough Process Research & Development Laboratories

Following on from the success of previous projects on the Charnwood site, Haden Young was selected to provide the Mechanical Services for the new research laboratory facilities.

The new building was constructed on a plot surrounded by existing laboratories which needed to remain fully operational throughout the project. Furthermore, the Haden Young team were tasked with diverting and connecting to site main utilities without disrupting supply.

Haden Young installed and commissioned heating and cooling, steam, public health, specialist gas and treated process water systems as well as a pipe bridge.

Prior to construction, Haden Young led the coordination of the 3D modelling and Clash Detection analysis of all building services.

Client: AstraZeneca R&D Charnwood

Architect: AMEC Design and Management

Consulting Engineer: AMEC Design and Management

Quantity Surveyor: Gleeds

Construction Manager: AMEC Construction

Project Manager: AstraZeneca R&D Charnwood Engineering & Facilities
